

DecodeLabs Data Analytics Internship

Project 1: Data Cleaning & Preparation - Final Outcome

The raw e-commerce dataset was successfully cleaned and prepared for analysis. Missing values were identified and handled appropriately, duplicate records were removed, and inconsistent date, text, and numeric formats were standardized. TotalPrice values were verified against $\text{Quantity} \times \text{UnitPrice}$ to ensure accuracy. After validation, the dataset became complete, consistent, and free from major data quality issues. The cleaned dataset is now reliable and ready for data analysis, visualization, dashboard creation, and business reporting.

Summary

- Missing values handled
- Duplicate records removed
- Date formats standardized
- Text formatting corrected
- Numeric columns validated
- TotalPrice calculations verified
- Dataset ready for analysis and visualization
